EDUCATION

University of Waterloo

Bachelors of Computer Science, GPA: 3.9

Waterloo, ON

Sept. 2024 – Sept. 2029

Wilfrid Laurier University

Bachelors of Business Administration, GPA: 3.9

Waterloo, ON

Sept. 2024 – Sept. 2029

EXPERIENCE

Manulife

Software Engineer

Jan. 2026 - Apr. 2026

Waterloo, ON

- Architected an automated data pipeline using Python and MySQL to extract and synchronize Salesforce records into New Relic, delivering a centralized dashboard that enhanced system observability for the Integrations team.
- Engineered a Co-pilot Studio agent utilizing natural language processing to automate the generation of standardized Jira tickets, eliminating manual administrative overhead and accelerating issue resolution.
- Optimized business intelligence workflows by developing SQL queries within Salesforce Marketing Cloud, extracting critical performance metrics to drive data-informed decisions for senior business stakeholders.
- Orchestrated meetings translating business challenges from the sales team into actionable software requirements.
- Secured and deployed a custom Python app pipeline to the cloud using Kubernetes and Jenkins CI/CD workflows, enforcing security standards by performing Snyk scans and GitGuardian secret alerts prior to deployment.

Royal Bank of Canada (RBC)

Software Developer

May 2025 – Aug. 2025

Toronto, ON

- Developed a forecasting agent using Python that ingested and processed time-series data from 91 Kubernetes hosted services, enabling an estimated \$400K in annual savings for a single team and demonstrating POC.
- Accelerated cross-team adoption by developing a web UI and backend on-boarding workflow that streamlined integration of the forecasting agent, reducing setup time for new teams using Flask REST APIs.
- Reduced MAPE (from 10% to 7%) by using LangGraph and LangSmith for performance monitoring, data fetching, cyclic reasoning, and data cleansing, enabling more reliable forecasts and better-informed decisions.
- Achieved 5% MAPE with only 100 data points by creating an “Iterative Calibration” method simulating LLM backpropagation with mini chain-of-thought runs, reducing forecast bias and improving prediction accuracy.
- Secured an initial and follow-up meeting with EVP of Core Banking & Payments Technology by presenting potential enterprise-wide benefits, leading to deeper evaluation of performance and cost savings.
- Documented data workflows and pipeline setup in Confluence, creating reusable references that reduced onboarding time across 3 teams and reinforced best practices in data pipeline management.
- Improved service stability by 20% across 91 microservices by optimizing CI/CD pipelines (GitHub Actions, SonarQube, Docker), strengthening deployment resilience and aligning with cloud-first DevOps practices.

Municipality of Whitestone

Summer Intern

Summers 2021–2024

Whitestone, ON

- Reduced delays and ensured compliance for 50+ daily landfill visitors by providing targeted guidance on waste categorization and routing, optimizing traffic flow and improving overall site efficiency and visitor experience.
- Maintained a safe and organized worksite by identifying and removing hazards using tools such as metal detectors and rakes, improving team morale and ensuring a cleaner, hazard-free environment for staff and visitors.

PROJECTS

Talk 2 Me VR | Python, Flask, Unity, Whisper, Gemini, ElevenLabs, MCP

Aug. 2025

- Trained users to identify early signs of depression by creating an immersive VR simulation with AI-guided conversations, increasing awareness and empathy skills for real-world scenarios.
- Engineered a multi threaded Unity frontend in C# with a Flask backend, maintaining sub-second AI response times, creating a smooth and responsive user experience that supported uninterrupted, natural dialogue flow.
- Integrated Whisper for speech recognition, Gemini for dialogue orchestration, and ElevenLabs for text-to-speech, enabling real-time, natural-sounding interactions that maintained conversational flow and user immersion.
- Implemented MCP tool calling for reactive facial expressions and a custom persona through a multi-layer system prompt, enhancing immersion and emotional realism while fostering deeper player engagement.
- Provided personalized, research-backed feedback by evaluating user empathy and engagement, delivering actionable insights grounded in mental health communication studies to help users improve future interactions.

CASE COMPETITIONS

QuickBinge | *Powerpoint, Canva, Bell Media, Crave*

March. 2025

- Proposed a new digital product concept (QuickBinge) to help Bell Media attract Gen-Z viewers, projected to generate \$300M–\$350M in annual revenue, by designing short-form edited versions of existing movies and shows.
- Increased Bell Media’s potential engagement among Gen-Z (34% of Canadian population) by conducting consumer profiling and identifying key behaviors such as low completion rates and preference for flexible on-demand viewing.
- Enhanced monetization opportunities by an estimated \$267M annually by integrating QuickBinge into Bell’s Crave subscription tiers and structuring upsell pathways with “try-before-you-buy” models.
- Accelerated time-to-market for QuickBinge by building a 12-month phased implementation roadmap, including team activation, video editing pipelines, social media marketing campaigns, and user feedback loops.
- Mitigated risks of product cannibalization and low adoption rates, ensuring long-term sustainability, by bundling QuickBinge with subscriptions and partnering with influencers to differentiate from social media competitors.

AWARDS & SCHOLARSHIPS

Wilfrid Laurier President’s Gold Scholarship

June 2024 – Present

- Maintained eligibility for a \$4,000 annual scholarship by sustaining a 3.8 GPA or higher throughout degree.

TECHNICAL SKILLS

Languages: Python, C++, C, Java, JavaScript, HTML/CSS

Frameworks: Flask, FastAPI, JUnit, React, Node.js

Developer Tools: Git, Kubernetes, Github Actions, VS Code

Libraries: pandas, NumPy, Matplotlib, LangGraph, LangSmith
